

## **Energy Efficient Metal Roofing**

**By: Sandy Woody, Affordable Metal Roofing**

Today, homeowners tend to prefer energy efficient products when purchasing a new home, or when renovating their current home. Energy efficient products can provide a long-term cost reduction on energy bills.

Energy efficient choices can save homeowners about one third of their energy bill, without having to sacrifice style and features. Among the many possible upgrades, metal roofing is one the most energy efficient roofing options available.

Affordable Metal Roofing carries ENERGY STAR qualified products, which reflect more of the sun's rays and heat. This can lower the roof surface temperature by up to 100F, which decreases the amount of heat transferred into the home.

Affordable Metal Roofing's products can also help reduce the amount of air conditioning needed in the home and can also reduce peak cooling demand by up to 15%. This type of roofing also effectively reduces cooling loads in the summertime and will effectively insulate the home during the winter.

Metal roofing not only looks great and costs less in the long run, but is maintenance free and will last for decades.

*Affordable Metal Roofing, located in Little River, SC, is one of the area's largest providers of metal roofing. Working with homeowners on both new construction and remodels, the company serves both North Carolina and South Carolina. For more*
